Intellicore CMP — User Guide

What is Intellicore CMP?

Intellicore CMP (Cloud Management Platform) is Searce's AI-native intelligence layer for managed cloud operations. Unlike traditional dashboards that show static data, Intellicore fuses **Operational Memory** — learnings from every past incident, resolution, and optimization — with five ops pillars to give your team context-aware intelligence.

Managed by: Searce CSRE (Cloud Solutions & Reliability Engineering) Squad

Getting Started

Signing In

1. Navigate to your Intellicore CMP instance URL
2. Enter your email and password on the login page
3. **First login:** You'll be prompted to set up two-factor authentication - Scan the QR code with Google Authenticator, Authy, or 1Password - Enter the 6-digit code to complete setup
4. **Subsequent logins:** Enter your 6-digit authenticator code
5. Check "Remember this device for 30 days" to skip TOTP on trusted devices

Navigation

The left sidebar organizes Intellicore CMP into two sections:

INTELLIGENCE — Your five ops pillars + command center: | Page | What It Shows | |-----|-----| | Command Center | Executive briefing across all pillars | | CloudOps | Infrastructure health, workloads, incidents | | FinOps | Cost intelligence, anomalies, optimization | | SecOps | Security posture, findings, compliance | | DevOps | Change intelligence, orchestration, patches | | AIOps | AI agents, analysis tools, governance |

REFERENCE — Supporting views: | Page | What It Shows | |-----|-----| | Assets / CMDB | Cloud resource inventory across providers | | Alerts | Active, acknowledged, and resolved alerts | | Memory | The platform's operational knowledge base |

Command Center

The Command Center is your morning-briefing dashboard. It answers: *"What do I need to know right now?"*

Intelligence Briefing

Five score cards show the health of each ops pillar: - **Score** (0–100): Composite health metric - **Status:** Healthy (green), Warning (amber), Critical (red), Active (blue for AIOps) - **Note:** Brief context when something needs attention

Needs Your Attention

Priority cards ranked by severity: - **Red** — Critical: Immediate action required - **Amber** — Warning: Investigate within hours - **Blue** — Info: Awareness items

Each card includes a **Memory** section showing how similar situations were resolved before.

What Changed — Last 24h

Per-pillar summary of recent changes across your cloud environment.

Operational Memory — Patterns Detected

Table showing recurring patterns the platform has identified: - **Occurrences**: How many times the pattern appeared - **Auto-resolved**: How many were resolved without human intervention - **Avg resolve time**: Mean time to resolution - **Trend**:

Improving, stable, or new pattern

What's Working Well

Green checklist of healthy operational areas.

CloudOps

Workload Tabs

Switch between workload types using the top tabs: - **All Workloads** — Overview across all types - **Compute/VMs** — Virtual machine instances - **Kubernetes** — GKE/EKS clusters and node pools - **Databases** — Cloud SQL, AlloyDB, Spanner, etc. - **Serverless** — Cloud Functions, Cloud Run, Lambda - **Data & AI** — BigQuery, Dataflow, data pipelines

Overview vs. Analysis

Each workload type has two sub-views: - **Overview** — Current state, health indicators, resource details - **Analysis** — Deeper metrics: CPU trends, memory utilization, network patterns

Operational Memory

Every workload section includes a memory panel showing: - Past incidents affecting this workload type - How they were resolved - Whether auto-remediation was applied

Reading Instance Cards

Each instance shows: - **Name** and **type** (machine type, node count, etc.) - **Zone/Region** - **CPU** and **Memory** utilization bars - **Status**: Healthy, Warning, or Stopped - **Monthly cost** - **Last incident** with timestamp and resolution

Click an instance to expand its full detail panel with Memory context.

FinOps

Cost Intelligence

The primary tab showing: - **Total monthly cost** with month-over-month trend - **Cost by pillar** — breakdown across CloudOps, FinOps, SecOps, DevOps, AIOps - **Sparklines** — 7-day cost trend per service category - **Memory context** — what the platform remembers about cost patterns

Active Anomalies

Cost anomalies detected with correlation to past patterns: - **Severity badge**: Active (red), Resolved (green), False Positive (grey) - **Memory correlation**: Percentage match to known patterns - **Timeline**: When the anomaly started and its progression

Optimization Memory

Historical optimizations with savings tracking: - **Applied** — Optimizations already implemented with verified savings - **Pending** — Recommended optimizations awaiting approval - **Available** — New optimization opportunities identified

Forecasting

Projected costs for the next 3 months based on trend analysis.

SecOps

Security Posture Score

Donut chart showing overall security health (0–100) with breakdown: - Critical / High / Medium / Low finding counts

Findings Intelligence

Security findings enriched with Memory: - **CIS Benchmark** mapping (e.g., CIS 5.2 for SSH rules) - **Memory count** — how many times this finding type was seen before - **Last resolution** — what was done to fix it previously - **Auto-fix confidence** — percentage confidence for automated remediation - **Memory Note** — detailed resolution history from past incidents

Severity Filtering

Filter findings by severity level using the filter bar.

IAM Risk

Identity and access management risk analysis: - Overprivileged service accounts - Unused IAM roles - Cross-project permissions

Compliance

Framework compliance status: - CIS Benchmarks - SOC 2 - ISO 27001 - Progress bars showing passing/failing/not-assessed controls

Remediation Memory

History of all remediations performed with outcomes.

DevOps

Change Intelligence

Risk-scored changes across your infrastructure: - **Risk level**: High (red), Medium (amber), Low (green) - **Change type**: Config change, scaling event, deployment, etc. - **Memory context**: Similar changes and their outcomes

Orchestration

Infrastructure change requests with approval workflow: - Ticket reference - Resource and provider - Estimated cost impact - Risk assessment - Memory from similar past requests

Patch Compliance

Resources needing updates: - Current vs. target version - Days behind - Severity of the patch - Memory from previous patching cycles

Deployment Memory

Recent deployment history: - Success/failure status - Deployment target - Summary of what changed - Historical deployment patterns

AI Ops

AI Agents

Three autonomous agents monitoring your infrastructure: - **Status:** Active (processing), Investigating (deep analysis), Idle (monitoring) - **Description:** What the agent does - **Last action:** Most recent activity - **Confidence threshold:** Minimum confidence to take automated action

Query Infrastructure

Natural language query interface: - Type questions about your infrastructure in plain English - Quick query suggestions for common questions - Results displayed inline

AI Analysis Tools

Grid of specialized analysis capabilities: - Root cause analysis - Impact prediction - Resource optimization - Security threat modeling - Cost forecasting - Capacity planning

Usage & Governance

AI usage tracking and governance controls: - Token usage by agent - Decision audit trail - Confidence threshold management

Memory

The Memory page is the platform's knowledge base — everything it has learned.

All Memory

Searchable, filterable list of all memory entries: - **Timestamp** — when the learning was recorded - **Pillar** — which ops area it relates to - **Confidence** — how reliable the memory is (0–100%) - **Title** — what was learned - **Applied count** — how many times this knowledge was reused

Pillar Filter

Filter memories by ops pillar: All / CloudOps / FinOps / SecOps / DevOps

Incident Patterns

Recurring patterns identified across incidents: - **Occurrences** — total times the pattern appeared - **Auto-resolved** — times the platform handled it automatically - **Avg resolve time** — mean time to resolution - **Trend** — whether the pattern is improving, stable, or new - **Activity bars** — visual representation of pattern frequency

Remediation Library

Proven fix scripts and procedures: - **Confidence** — reliability score - **Times applied** — usage count - **Success rate** — percentage of successful applications - **Last applied** — most recent use

Learnings

Cross-pillar insights the platform has derived: - Connections between different ops areas - Emerging patterns that span multiple pillars

Assets / CMDB

Search and Filter

- **Search bar** — filter by asset name, type, or project
- **Provider tabs** — filter by cloud provider (All / GCP / AWS)
- **Sort** — by name, type, cost, or last seen

Asset Cards

Each asset shows: - **Name** and service subtitle - **Type** — VM, Cluster, Bucket, Function, etc. - **Provider** — GCP, AWS - **Region** - **State** — Running, Active, etc. - **Monthly cost** - **Project** - **Last seen** — most recent activity timestamp

Alerts

Status Filters

- **All** — every alert
- **Active** — currently firing
- **Acknowledged** — team has seen it
- **Resolved** — no longer active

Alert Cards

Each alert shows: - **Severity** — Critical (red), Warning (amber), Info (blue) - **Title** and **description** - **Resource** affected - **Time** — when the alert triggered - **Type** — anomaly type

Click to expand for additional details: - Baseline vs. current metric values - Percentage increase - Related context

Top Bar

The persistent top bar provides: - **Memory Search** — "Ask Memory anything about your cloud..." input - **Notifications Bell** — alert indicator - **User Profile** — shows your email and initials - **Logout** — end your session

Keyboard and Navigation

- All navigation is via the left sidebar
- Tab interfaces within pages switch content sections
- Search inputs filter data in real-time (local filtering)
- Cards expand/collapse for detail views

For Administrators

Environment Variables

Variable	Purpose
NEXT_PUBLIC_API_URL	Backend API URL (frontend)
API_URL_INTERNAL	Backend URL for server components
POSTGRES_*	Database connection
NEO4J_PASSWORD	Graph database
JWT_SECRET	Session signing key
ANTHROPIC_API_KEY	Claude API for AI features

Deployment

Intellicore CMP deploys via Docker Compose with: - **Caddy** — reverse proxy with automatic TLS - **Next.js** — frontend (port 3000) - **FastAPI** — backend (port 8000) - **PostgreSQL** — relational data - **Neo4j** — knowledge graph - **Redis** — sessions and caching

See `deploy/gcp/README.md` for GCP deployment instructions.
